

Rainbow SET® Radical-7®

The Radical-7 is a 3-in-1 (bedside, handheld, transport) Pulse CO-Oximeter™ that features Masimo noninvasive and continuous total hemoglobin (SpHb®). It helps clinicians to quickly detect chronic or acute anemia, to identify occult bleeding earlier, and to manage blood transfusions more effectively. SpHb, along with Masimo SET® SpO2, also allows for noninvasive real time oxygen content (SpOCTM) monitoring, providing a more complete indication of a patient's oxygenation status.

Clinicians in both hospital and outpatient surgical settings have the ability to track and trend a patient's total hemoglobin status in real time to quickly identify conditions of anemia or blood loss without having to draw blood and wait for lab results. The Radical-7, along with seven other noninvasive measurements available on the same platform, has the potential to enable clinicians to make earlier and better decisions, to improve patient safety, and to reduce costs in a variety of healthcare settings.
