

Long-Lasting Surgical Skin Marker

Viscot Medical introduces the Mini XL, a new surgical skin marker that, according to the company, lasts 10 times longer than traditional skin markers after pre-operative scrubbing with alcohol-based antiseptics such as Chloraprep or Duraprep. Additionally, the Mini XL offers:

- Clinicians the ability to use the appropriate antiseptic agents to prevent surgical site infections and still comply with the Joint Commission Protocol for correct site marking and pre-operative verification to prevent wrong site surgery.
- A patent-pending ink that remains visible after scrubbing with prep solutions. Virtual elimination of the need for re-marking the patient once in the operating room.
- Availability in non-sterile quantities of 200 or 1,000.
