## **Task-Vision LED Magnifiers**

Vision USA, a Dentrex Company, introduces a new line of magnifiers, with powers from 3X to 14X, with new led technology. Led is a light emitting diode, which means there are no bulbs to replace. The led produces a very bright light, which enhances the aspheric, anti-reflective coated lenses to produce crystal clear images. In addition, led technology allows the batteries to last up to 50 percent longer than conventional lighted magnifiers. All magnifiers come with a drawstring case.
