

PLA Tweezer Forceps

Published on Surgical Products (<http://www.surgicalproductsmag.com>)

PLA Tweezer Forceps

Qosina single-use PLA (*polylactic acid*) tweezer forceps are a biodegradable alternative to plastic kit components. PLA is an allergen free; environmentally-friendly material created from corn with the same physical properties as plastic and can be sterilized using Gamma or ETO. Our white tweezer forceps have serrated teeth for a secure grip. They are available in a 5.75 inch (146 mm) pointed tip style (*Part # 11484*) and a 6 inch (152 mm) locking style (*Part # 12139*).
