

Surgical Ultrasound System

Analogic Corporation's specialized ultrasound business, BK Medical, introduces the Flex Focus 700™, a mobile ultrasound system designed primarily for ultrasound guided surgical procedures in the operating room. The system is tailored to the specific needs of the surgical suite. Its size, mobility, power, and usability are all designed for the operating room, based on direct input from surgeons.

According to the company, features of the customizable system include:

- The ability to be controlled using the large touch screen or the simple touch pad on the control panel.
- A 19-inch screen that displays sharp laparoscopic, intraoperative, and percutaneous images, with detail that is visible from virtually any angle.
- A small, lightweight design that supports a wide range of sterilizable transducers.
