

Battery-Powered Procedure Table

The 440 Series Mobile Quad Battery Powered Procedure Table is available in a 24" (Model 440) or 22" (Model 439) wide procedure table that is ideal for providing a mobile surgery platform in the specialties of Ophthalmology, Plastic Surgery, ENT, Oral Surgery and others, who need to transport a patient from various locations within the clinic for procedures or surgeries. A smart lithium-ion battery powers the 440 without the need for connection to an electrical outlet for true operational mobility and allows you to use one chair without moving the patient which reduces patient handling and the possibility of patient or healthcare personnel injury. However, in case of a battery emergency, there is a standard power cord which can be used for uninterrupted operation. The multi-directional casters system provides complete mobility with a 3/4" (1.9 cm) base to floor clearance.
