

# Normothermia Monitoring And Management System

Hothead Technologies has executed an agreement with Shafer Medical Devices, a Division of Shafer Enterprises, LLC, to develop and distribute a medical application of the H.O.T.™ System that supports the Shafer Medical Devices' Hypo/Hyperthermic Pad in managing normothermia in patients during pre-op, surgery, and post-op.

The H.O.T.™ System, created by Hothead Technologies, wirelessly monitors body temperature, sending warning signals if the individual's temperature goes above or below a pre-determined threshold. Shafer Enterprises, LLC manufactures personal cooling systems for a variety of applications, including the Hypo/Hyperthermic Pad that keeps a person's body temperature at a safe level. Together the system is called SafeTemp, a normothermia monitoring and management system.

By integrating the H.O.T.™ System with the Hypo/Hyperthermic Pad, medical staff will have the ability to monitor multiple subjects to maintain optimum body temperatures, which may reduce the risk of post-surgical infections. Staff can view any patient's temperature from a wireless handheld PDA (personal digital assistant), and if temperature increases or decreases, the H.O.T.™ system can send a wireless command to the Hypo/Hyperthermic Pad to adjust the temperature to maintain normothermia.

The sensor is not affected by other electronic devices, does not add to the clutter of
