

## Safety Scalpel Handle™

Impressions of safety scalpels have generally been unfavorable amongst the surgical community. Due to the inadequate performance of existing safety scalpels, surgeons claim that the use of such devices would alter their current technique. As a result, Sandel Medical Industries has developed a revolutionary product which increases safety for surgical teams while maintaining the functionality and performance surgeons demand.

Breaking the mold of traditional safety scalpels, the Change-A-Blade™ is the first Safety Scalpel *Handle*. It provides surgeons with the freedom to utilize any standard #10, #11, or #15 blade and provides the comfort of a traditional #3 scalpel handle. It features a lockable safety shield that easily slides over the blade while maintaining the ability to fully retract into the scalpel handle. In addition, it allows for uninterrupted puncture-ability and unobstructed field of vision. Most importantly, the Change-A-Blade™ allows surgeons their preferred technique while ensuring the surgical team's safety during each procedure.
