

Bleach Towelettes

HYPE-WIPE bleach towelettes are EPA registered in all states as a one-step disinfectant with a one minute kill time for Tuberculosis (TB), Streptococcus, Salmonella, Pseudomonas, Norovirus, Respiratory Syncytical Virus (RSV), Human Influenza A (H1N1), Escherichia coli (ESBL), Carbapenem-Resistant Klebsiella pneumoniae (CRKP) and Rotavirus and a two minute kill time for Methicillin-Resistant Staphylococcus Aureus (MRSA), Vancomycin-Resistant Enterococcus (VRE), and Staph Aureus.

The individually packaged towels are saturated with the 1:10 dilution of sodium hypochlorite and are stabilized with detergent for a long shelf life. Save time and labor of mixing in-house bleach while ensuring disinfectant is efficacious. Hype-Wipes are portable, convenient and safe for disinfecting hard, non-porous surfaces.

May be utilized at clinical and research labs, blood banks, physician and dental offices, ambulances, wastewater facilities, and blood banks. Available in two sizes: Full (6" x 12") and Mini (3" x 3").
