

High-Density Storage Shelving

DSI offers its "Modustor Storage Wall" high-density storage shelving for bulk items in the OR and CSR/SPD areas. According to the company, each shelf is capable of holding 440 lbs. of product. This system is ergonomical in that the shelves extend fully so heavy items (i.e. instrument sterilization containers or large packs) can be removed easily without the employee having to bend over exposing themselves to back injuries.
