

Duplex 3/D Swinger® Rail Clamp

Automated Medical Products' new Duplex 3/D Swinger® Rail Clamp is designed to fix the Iron Intern® to the operating table while providing 360° of vertical support and the ability to lock that vertical pole in any position providing support 180 degrees to parallel to the table. This newly developed (patent pending) rail clamp has two centers of support and increases the strength of the device by shifting the majority of the support directly to the rail. These supports hold the device to the table rail and hold the vertical upright independent of fixation on the rail.
