## Heavy Duty Cooling Vest

Polar Products, Inc. has developed a new heavy duty vest style for the company's Cool Flow™ System, specifically designed for wear beneath lead aprons. According to the company, the Cool Flow™ Vest System provides cooling comfort during long surgeries. Ice water continuously circulates from a 15 quart cooling reservoir through insulated tubing sewn within the vest. Additional features include:

- High flow, quick-disconnect couplings that allow freedom of movement as needed.
- Made with an extra-strength tubing compared to other styles of surgical cooling vests.
- A higher flow rate and tougher walled tubing, allowing it to endure heavier wear, such as beneath lead aprons or under protective clothing.
