

Widescreen Monitor

RadiForce LS560W

EIZO's RadiForce LS560W is a large widescreen monitor with a 3840 x 2160 native resolution and a 56-inch screen area roughly equal in size to six 1.3 megapixel (1280 x 1024) monitors or four full HD monitors. Compared with multi-monitor scenarios, the LS560W has no regional color differences or obtrusive bezels, thus reducing eye fatigue and the potential for distraction in surgical environments. Flexible viewing of large volumes of information on a single monitor improves workflow efficiency and saves time. Individual image placement and window size preferences can be easily arranged and recalled using the Large Monitor Manager (LMM). With its redundant components architecture (2 power supplies, 2 backlights, 2 transmission links), EIZO ensures a high degree of operational reliability for fail-safe environments.
