

Wound Protection/Retraction

Applied Medical's Alexis® wound protector/retractor is designed for soft tissue protection and retraction, effectively holding the incision site open, and maximizing surgical efficiency. Available in multiple sizes to accommodate a wide range of procedures, the Alexis wound protector/retractor provides:

- Protection by significantly decreasing risk of infection† and maintaining moisture at the incision site.
- Circumferential retraction and the ability to distribute force evenly, eliminating point trauma and associated pain.
- The ability to maximize exposure, minimize incision size and allow visualization of wound margins.
