

## Large-Volume Flexible I.V. Container

Hospira's VisIV™ container is the first environmentally responsible large-volume flexible I.V. container to feature a full line of sizes without an overwrap, and the product also offers patient and caregiver safety benefits, such as sterile, virtually impenetrable medication additive port tubes and a flanged port design to help protect against needlesticks. The containers also provide a greater protective area for clinicians as they add medications to the container.
