

## Thin Dressing Designed To Improve Conformability

ConvaTec introduces a new and improved version of Versiva® XC® dressing. The new Versiva® XC® dressing is thinner and designed to improve the ability to conform to the body.

The new and improved Versiva® XC® dressing includes a thinner layer of adhesive, making it 40% more conformable at its border.[i]\* Greater conformability is designed and intended to improve flexibility, which may enhance patient comfort. The dressing was developed based on feedback and collaboration with clinicians and nurses who use adhesive dressings to help promote wound healing.

Because Versiva® XC® is thinner, it also represents a more discreet dressing option that can improve patient confidence that the dressing will remain in place and is designed to support improved healing, healthy periwound skin and increased comfort.

The thinner Versiva® XC® dressing is currently available within the U.S. in adhesive and non-adhesive dressing options for use by healthcare professionals to manage chronic and acute wounds and is easily identified by the “Improved” label on the box.
