

## Linear Motion Shoulder Arthroscopy Chair

The Schuremed Linear Motion Shoulder Chair is the only chair on the market with a self-contained motor and does not have to rely on the surgical table for power. The double ball joint head system safely secures patient's head with even your kyphosis patients. Chair adjusts from 0-90\* in 8 seconds in a slow controlled movement. 1,350 lbs. of lift supports patients up to 500 lbs. Attaches to ANY operating room table with our integrated adjustable mounting clamps. Lateral brace included. The shoulder pull-way panels provide excellent surgical exposure.
