

Safety Scalpel Handles™

Ansell Sandel Medical Solutions has extended their line of innovative Change-A-Blade® safety scalpel handles. The NEW #3L and #4 handles offer identical safety features as the original Change-A-Blade® and provide added safety to the surgical team during a wider variety of cases. Sandel Safety Scalpel Handles™ help reduce the incidence of sharps injuries while complying with requirements from OSHA, AORN, and The American College of Surgeons. Each safety scalpel handle features a lockable safety shield and provides surgeons the freedom to utilize their preferred choice of blade. These handles allow for uninterrupted puncture-ability and unobstructed field of vision. Change-A-Blade® products increase safety for the entire surgical team while maintaining the functionality and performance that surgeons demand.
