

Portable Smoke Evacuation System

A stand alone, portable smoke evacuation system with a highly efficient filtration system is the best way to protect staff and patients from the potentially harmful effects of airborne contaminants present in laser and electrosurgical smoke. Surgimedics' Surgifresh Turbo is a freestanding, economical smoke evacuation system featuring quiet operation, filter replacements based on actual filter life and easily adjusted air flow. The primary ULPA filter typically lasts for 24 hours of continuous use. With its lightweight and portable design, it is easily moved between procedure rooms. The Surgifresh Turbo is recommended for all laser and electrosurgical procedures in numerous medical specialties.
