

Platform Of New Ultrasound Products

GE Healthcare is committed to expanding the reach of ultrasound technology. Thus at RSNA, the company will showcase a number of its innovative technologies available globally, including the latest breakthroughs on its LOGIQ, Voluson and ViewPoint platforms. Among the LOGIQ products that GE will feature is the LOGIQ® E9, recognized earlier this year by 2011 Top 20 Best in KLAS Awards: Medical Equipment & Infrastructure report as the top general imaging ultrasound system in the market. For ease of use and portability, GE will also be showcasing two of its miniaturized ultrasound devices--the Venue 40, a miniaturized ultrasound platform created for smaller clinical spaces; and Vscan, a pocket-sized visualization tool developed to provide physicians with imaging capabilities at the point-of-care.
