

TABLEGARD Patient Care System

BERCHTOLD's new TABLEGARD® with Quattro Therapy™ is an OR mattress that is designed for surgical tables which brings proven alternating pressure redistribution to the surgical suite. During the course of a cycle, one of every four mattress cells will deflate for a period and then re-inflate to the previous level; the patient is supported by 75% of the surface at all times providing an extremely stable surface for the surgical procedure. The cycle is then repeated in the next series of cells. The alternating pressure creating the subtle removing and reapplying of pressure allows blood to flow providing oxygenation to the tissue cells.
