

Wireless HD Audio and Video

Foreseeson's WIS1000, our 60 GHz Wireless HD transmitter/receiver, provides an easy and flexible solution to wireless transmitting. This system supports HD video, 1080p/60Hz, plus new 3D video formats generated by HDMI 1.4a. Both CEC and non-CEC enabled devices are compatible with its wireless system.

Many times the DVI output signal between different camera manufactures do not follow the same standard. In these situations, Foreseeson's WIS1001 can solve the problem. The WIS1001 is a DVI converter and scaler created to provide a "clean" output signal complying with industry standards. It allows the user to upscale a lower resolution to HD. The WIS1001 is designed to be used with, and easily connected to, Foreseeson's wireless WIS1000 product.
