

Disposable Port For Laparoscopic Surgery

The InnoPort from Innovia LLC is a sterile, disposable port for laparoscopic surgery which allows three instruments to access the abdominal cavity, preferably via the umbilicus, while maintaining pneumoperitoneum and fully clinically relevant range of instrument motion. It consists of a rubber Body, three soft silicone Valves, an Insufflation Tube, and an Exhaust Tube. The Body includes a rigid component at the top to facilitate suture tie-down to the abdominal surface. It is intended for use by laparoscopic surgeons doing Single Port Access surgeries such as cholecystectomy, hernia repair and total laparoscopic hysterectomy.
