

Anterior Posterior Surgical Stand

The new Alinsod APS Stand is the first and only ergonomically designed surgical stand, specifically designed to reduce arm, elbow, shoulder, and lower back fatigue during surgery, while stabilizing the surgeons' elbows and hands to aid in precision surgery. It is ideal for anterior and posterior compartment repairs, which includes reconstructive and aesthetic gynecologic surgery. It is ideal for delicate cosmetic surgeries where steady hands are essential. It also eliminates balancing trays on the surgeon's lap and allows for the easy placement of surgical instruments at his/her fingertips. The stand's height can be easily adjusted to the surgeon's exact preference via foot operated gas spring.
