

Automated Dispensing System

CareFusion has launched the Pyxis® Enterprise System (ES) platform, a new generation of its industry-leading automated dispensing systems that will enable hospital customers to simplify and standardize the medication management process, both within a single facility and across an entire health system.

The new CareFusion Pyxis hardware and software's key benefits include:

- Delivering significant reduction of nursing and pharmacy time to dispense and refill medications due to simpler, more efficient workflows;
- Eliminating the need for redundant data entry through direct synchronization with pharmacy, hospital, and identity management systems;
- Enabling consistent medication management practice and policies across the multiple hospitals in an integrated delivery network (IDN) through a single, scalable, browser accessible server; and
- Meeting key needs of the IT department with flexible deployment, security, backup and domain capabilities.
