Surgical Skin Marker

Red Ribbon Winner - Patient/Staff Safety & Education

Aspen Surgical introduces the new WriteSite® Plus Surgical Skin Marker. The marker contains Gentian Violet ink that is specifically formulated for use with ChloroPrep® products. According to the company, this ink remains three times darker than standard Gentian Violet ink after prep with ChloroPrep products and is formulated to reduce blurring. Use of the marker can help reduce the need for re-marking after prep. Use of the marker also allows for greater visibility of surgical markings to support correct site surgery and compliance with the Joint Commission's Universal Protocol.
