

Wearable Sensor Technology

Avery Dennison Medical Solutions has announced the Avery Dennison Metria, a low-cost, patch-based wearable sensor technology platform. The new platform provides comfortable, secure and low-profile physiological monitoring for a variety of applications. The Metria technology platform will be based on Avery Dennison Medical Solutions advanced adhesives, materials and manufacturing processes in combination with a personal monitoring device for continuous physiologic monitoring developed by Proteus Biomedical, Inc. It will incorporate multiple sensors including ECG and an accelerometer that will allow measurement of heart rate, activity, sleep and other physiologic metrics.
