

Hemodynamic Cardiac Monitoring

Philips Healthcare announced the release of the Xper Flex Cardio Physiomonitring system, a hemodynamic cardiac monitoring solution used to facilitate invasive investigation of heart and vascular disease. Equipped with the latest advanced clinical decision support tools to assist clinicians in evaluating a patient's overall cardio performance, and general cardiovascular status, Xper Flex Cardio may also be used to display and analyze invasive blood pressure, surface EGG (electrocardiogram), respiration and other vital signs. The system is specifically designed for environments such as cath labs, EP labs and interventional radiology and cardiovascular Hybrid OR environments.
