

## Burn Dressing

ConvaTec, a world-leading developer and marketer of innovative medical technologies for community and hospital care, today announced the introduction of AQUACEL® Ag BURN dressing, a new wound dressing for the management of partial thickness burns (PTBs) and donor sites. AQUACEL® Ag BURN dressing incorporates the company's proprietary Hydrofiber® Technology, which has been shown in an in-vitro study to lock in fluid and trap bacteria and to contour closely to uneven wound surfaces.

AQUACEL® Ag BURN dressing, for PTBs, can be left in place for up to 21 days, helping to reduce the need for painful dressing changes and the risk of exposure to pathogens in the atmosphere. In current common practice, patients with PTBs must often undergo painful dressing changes as frequently as twice daily, causing often severe discomfort and exposing the wound surface to potential infection from a range of pathogens.
