

Disposable Doppler Probes

VTI specializes in intraoperative Doppler systems that meet all unique surgical needs. The company's single-patient use probes are available for vascular, microvascular and laparoscopic procedures and eliminate the problem of missing or broken probes. VTI's new Drop-In probe for Robotic renal procedures minimizes risk of significant bleeding while significantly reducing hilar dissection time. The Drop-In probe provides for fast, efficient identification of the renal hilum without an added learning curve.
