

Laparoscopic Plume Filtration

Complementing Buffalo Filter's current LapEvac® system, is the new PlumePort™ Laparoscopic Plume Filtration device that improves surgical visibility and protects staff from the hazards of smoke during laparoscopic procedures. Unlike other devices the Plumeport offers a dual moisture management process that eliminates moisture build up and flow degradation during surgery. Design with up to 2x more filter media than similar products on the market, the PlumePort can support surgeries that last up to four hours.
