

Cool Flow Vest System

Polar Products' Cool Flow Vest System provides cooling comfort during long surgeries by continuously circulating cold water from a 15 quart cooler through over 50 feet of insulated tubing within the vest. Breakaway couplings allow freedom of movement as needed. The Fitted Vest weighs less than 8 ounces and has a snug, comfortable fit. The Heavy-Duty Vest system has 50 percent thicker walled tubing. Designed for wear beneath lead aprons and for extra-tough applications.
