## <strong>3D Monitor</strong>

Panasonic offers a medical-grade 32 inch class monitor, the EJ-MDA32U-K. The 3D monitor is fully compliant with medical equipment standards, delivers 2D and 3D image quality and can display multiple images from various sources at once. The EJ-MDA32U-K aims to improve the surgical experience by having a large screen, HD image that can be clearly viewed by all clinicians, while also providing flexibility that helps to reduce clutter. The EJ-MDA32U-K allows for up to three images, from three separate sources, to be displayed simultaneously, on one screen. The monitor supports two HD-SDI inputs, two DVI inputs and an analog input. This allows live viewing of the surgical procedure, radiological images and vital signs on a single display. This multi-function viewing capability helps reduce clutter and cabling in the surgical suite.
