

Intra-Aortic Balloon Catheters

MAQUET Cardiovascular offers the MEGA 7.5Fr. 30cc and 40cc intra-aortic balloon (IAB) catheters. These catheters will allow clinicians to provide patients with hemodynamic support, regardless of their height. The design of the MEGA IAB family provides benefits for patients and clinicians—MEGA's balloons displace blood in the aorta during diastole, resulting in improved augmentation and unloading.
