IV Clear Film Dressing

Covalon Technologies Ltd. has announced IV Clear™, a breakthrough antimicrobial silicone adhesive film dressing designed for securing vascular intravenous access devices. IV Clear combines the comfort of skin-friendly silicone adhesive technology with the advanced antimicrobial protection of two gold-standard antimicrobial agents- chlorhexidine and silver. IV Clear secures vascular access devices to the skin while providing antimicrobial protection for up to 7 days. IV Clear is intended to cover and protect insertion sites and to secure the various intravenous devices to a patient's skin.
