

Portable Surgical Headlight System

HHW Technologies, Inc. offers the F1 HID Portable Surgical Headlight System to maintain high intensity light output comparable to 300-W Xenon light sources with up to a 4.5-hour usage per charge with true color rendition, no heat buildup and reduced surgeon fatigue. As the only portable headlight system to provide arcing bulb performance, the F1 HID is the only surgical headlight that bridges the gap between plug-in light boxes and portable systems with lesser performance.
