

CardioHelp

MAQUET MEDICAL SYSTEMS has introduced the CardioHelp, a portable heart-lung support system providing extracorporeal life support to replace or support a patient's circulation and respiration. The CardioHelp System is designed to be carried by one person and compact enough to be transported anywhere within the hospital or even in a helicopter or vehicle. The CardioHelp System also has integrated safety features inside one unit and allows the patient to be connected to the support they need, anywhere and anytime, immediately and emergently, to begin recovering or stabilizing.
