

RealView Perioperative Workflow Controller

Steris's RealView Perioperative Workflow Controller is a live, patient-centric, lean visual management system that is designed to transform the entire perioperative continuum of care into a calm, predictable high-performance environment. The RealView controller works with real-time location patient tracking and OR scheduling systems technology. It integrates patient information, staff and family communication, and resource allocation with built-in logic, auto notifications to physicians and staff, daily exception flags and alerts, and OR decision-making analytics to keep OR schedules running smoothly.
