## D-H.E.L.P.

New Wave Surgical's Defogging Heated Endoscopic Lens Protector system (D-H.E.L.P.™) provides optimum visualization during laparoscopic or robotic surgery. The compact unit affixes to patient drapes allowing quick access to the defogging/cleaning system using only one hand. In just 5 minutes, anti-fogging solution warms to approximately 120°F to warm endoscopic camera lens—during the case D-H.E.L.P. breaks down fats and washes fluids and tissue from the lens in 5 seconds.
