

IntraTemp Fluid Warming System

Ecolab Healthcare's IntraTemp™ Fluid Warming System provides immediate access to warm irrigation fluid at a controlled temperature to increase patient safety and reduce the risk of hypothermia. The unique ThermoBasin™ combines a large, puncture-resistant basin with a sterile drape. The LED temperature display provides a clearly visible temperature reading that can be seen underneath the drape and confirms the fluid temperature at the point of use. Pocket warmers on the side of the unit warm extra bottles or bags of irrigation or IV fluid, so pre-warmed fluid are readily available during procedures.
