

## Pediatric Pads

With approximately 80 percent of the top pediatric hospitals using Action® brand positioners in their OR and NICUs, Action decided to expand the line with two more head pads and three positioners to protect the smallest of patients. Incrementally different sized products are meaningful to improving the quality of care for this patient population. The company leads the pediatric positioning market with the most sizes of pediatric pads and positioners on the market today, providing a soft Akton® viscoelastic polymer spot for pediatric patients.
