Stallion Elite

Bryton's Stallion Elite allows a surgeon to move freely, without the restriction of fiber optic cables running back to a light source. The Elite is equipped with laser type diode technology which puts out 200,000lux. The light uses minimal energy to run with maximum light output and performance, allowing the headlight to run up to 9 hours per charge. Two lightweight lithium-ion batteries can be changed one at a time without losing light to minimize interruption throughout the surgical procedure.
