

Prep-Resistant Ink Marker

Viscot Medical

Viscot Medical's new AllSkin™ Plus+ is the first prep-resistant ink marker that offers maximum visibility and prep resistance on all skin tones. Its specially-formulated VIXL brilliant blue ink provides enhanced visibility even after prepping with common alcohol-based antiseptics. AllSkin™ Plus+ remains visible up to 10X longer than traditional ink on all skin tones. This allows clinicians to better see the surgical site, while virtually eliminating the need for remarking of the patient once they're in the operating room AllSkin™ Plus+ is available with a fine/regular tip.
