

ProShield

DeRoyal

DeRoyal offers the ProShield to proactively address the FDA's safety communication to reduce cross contamination. The ProShield is a value-laden, single-use endoscope transport system that improves handling protocols and helps reduce the amount of scope transport damage. ProShield further aids in the reprocessing of flexible scopes by allowing the clinician to begin the cleaning process at the patient's bedside, reducing the risk of hospital acquired infections. Proper storage and transport of flexible endoscopes, including TEE Probes, begins and ends with the ProShield.
