

Protexis Latex Basic Powder-Free Surgical Gloves

Protexis™ Latex Basic surgical gloves from Cardinal Health are an ideal solution for the cost-conscious healthcare professional that requires basic barrier protection during surgical procedures - from bloodborne pathogens and transmittable infections - with the comfort and fit they expect from premium surgical gloves. The gloves are made from natural rubber latex* and are powder-free. They are produced on a proprietary glove mold that includes an independent thumb design for an anatomical fit and more natural movement in the fingers, thumb and palm and roll-down resistant cuffs. The glove's fingertip thickness (9 mils) and length (11.625 inches) provide the essential protection needed during sterile procedures.

For more information, visit www.cardinalhealth.com [1].

Footnote: * Contains 50 µg or less of total water extractable protein/dm². Tested in accordance with ASTM D 5712. Caution: Safe use of these gloves by or on latex-sensitized individuals has not been established.
