

# Smart-Seal Surgical Mask

Cardinal Health

Cardinal Health announces the Smart-Seal™ surgical mask, designed to enhance fit and help reduce fog on eyewear. The Smart-Seal surgical mask features a “cinch and hug” single-tie design that creates a custom seal around the wearer’s nose and mouth. The innovative design eliminates gaps between the wearer’s face and the mask, promoting proper use and helping to reduce contamination risks in the perioperative environment. The Smart-Seal surgical mask features closed-cell foam and a fog-reducing vapor barrier. It also has a large chamber with two rows of sonic bonds that help keep the mask filter away from the wearer’s face and minimize distractions.
