

Suction Canister Systems

Dynarex Corp. has introduced Suction Canister Systems made of durable plastic designed for collecting and retaining aspirated materials. These canisters have self-sealing filters with increased flow which eliminate damaging backflow to the suction regulator. The unique construction has a foam guard that keeps the float valve securely in place, preventing any premature shut off. There are two sizes available, 1200cc High-Flow in a kit and the 800cc High-Flow model.
