

Trendelenburg Positioner

AliMed

The AliMed Trendelenburg Positioner uses a unique method in order to secure patients in extreme position in place. An “anchor” secures around the base, keeping the patient from sliding (often called the “Trendelenburg Slide”). The positioner also incorporates integrated methods to secure the arms in place while safely stopping patients from sliding. It is disposable, reducing cleanup time and a facilities’ risk of cross contamination. A one-size-fits-all complete positioning system, it is easy to remove from the table and dispose of after a procedure.
