

Wireless HD Video

NDS Surgical Imaging

ZeroWire® from NDS Surgical Imaging is the first fully-operational, FDA-approved, medical-grade technology to provide a robust wireless video link in the modern surgical OR. Utilizing the Ultra-wideband (UWB) frequency spectrum between 3.1 to 4.8 GHz, ZeroWire avoids interference with and from other devices. Designed for minimally invasive surgery and interventional procedures, ZeroWire allows surgical staff to view full HD surgical video (1080p60) wirelessly in real time, with less than 1-frame latency.
