

EPS Sterile Labels

EPS

EPS is pleased to announce its EPS Sterile Labels for operating and procedure rooms. They're another addition to its product line to help facilities maintain JCAHO compliance and reduce the potential for medication error. Since the EPS Sterile Labels are provided in individual packages, facilities no longer have to create or sterilize large quantities of labels in-house. The labels are available in a convenient ½" x 1 ½" size and can be used on syringes, bowls, basins...any container used during procedures. Two sterile stock medication label sets are immediately available. Custom medications label sets can be quickly produced for specific applications.
